

APPLICATION GUIDE Version 4.0

PAVERDETERGENT™

PAVE CHEM®
SEALERS, CLEANERS and ADHESIVES

Visit website for the most up-to-date version of application instructions

PAVERDETERGENT is a specially formulated mix of detergents and mild acids designed for removal of oil, grease and other stains from concrete and clay pavers. It is safe and effective for use on sealed and unsealed pavers. Best results are achieved when spills are cleaned as soon as possible after the incident.

PAVERDETERGENT Instructions

CAUTION!

Before using *PAVERDETERGENT*, be sure to read this entire application guide and take proper precautions when handling and applying. Avoid contact with eyes, skin and clothing. **Always wear protective eye glasses, rubber boots and gloves when using.** Make sure to check tightness of lids before transport or handling. Do not allow *PAVERDETERGENT* to be stored or come into contact with metals or strong oxidizers. Keep out of reach of children. Thoroughly rinse empty containers with water and dispose of according to federal, state and local regulations.

As with all cleaners containing acids, a test for surface and color reaction should be conducted in an inconspicuous place before applying to the entire area.

Preparation:

1. If the oil, grease or food spill has just occurred, first try to absorb or clean off as much as possible.
2. Pre-wet the area to be treated, very hot water is recommended.

Application:

1. Wearing the proper eye and skin protection, apply *PAVERDETERGENT* generously to the stain. Do NOT dilute, pour straight from the bottle.
2. Using a stiff, synthetic fiber brush, immediately scrub the stain for 1 minute. Do not use a metal bristle brush.
3. Rinse thoroughly with hot water and allow area to dry.
4. If the stain is severe, more than one application may be required.

Note: If stain is very severe or is a non-petroleum stain (rust, fertilizer, or other chemicals), use *PAVERDE-STAINER* instead.

If the pavers are being cleaned in preparation for sealing, spot clean all oil, grease and food stains with *PAVERDETERGENT* **before** application of *PAVERPREP* Efflorescence Cleaner. If the petroleum stain is on unsealed pavers and has been left untreated for a long time, complete removal of the stain may not be possible. If *PAVERDETERGENT* or *PAVERDE-STAINER* can not clean the stain to meet approval, consider replacing the paver(s) **before** application of *PAVERPREP*.

Clean-up:

1. While still wearing eye and skin protection, thoroughly rinse the scrub brush with clean water. Also, with the lid securely on, rinse off the outside of the *PAVERDETERGENT* container to clean off any acid that may be present.
2. If the *PAVERDETERGENT* container is empty, thoroughly rinse out the inside of the bottle with clean water. Then rinse off the outside of the container and the lid and dispose of properly.

Separate Application Guides and MSDS Sheets are available for *PAVERGUARD*, *PAVERECOGUARD*, *SILOXAGUARD*, *PAVERPREP* and *PAVERDE-STAINER*. Contact your dealer or PAVE TECH for a copy. They are also available for downloading at www.pavetech.com.
